

KARL DEUTSCH –

Definitely Tested!

Since its foundation in 1949, the owner-managed company KARL DEUTSCH has been engaged in the development and production of equipment for non-destructive material testing. Our range includes devices, sensors, chemical inspection media and systems for ultrasonic, magnetic particle and penetration testing. Measuring instruments for wall thickness, coating thickness and crack depth complete the product range

Which works

are you visiting?

We look forward to your visit. To ensure we are prepared to welcome you warmly, please clarify with your contact person which works you will be visiting.

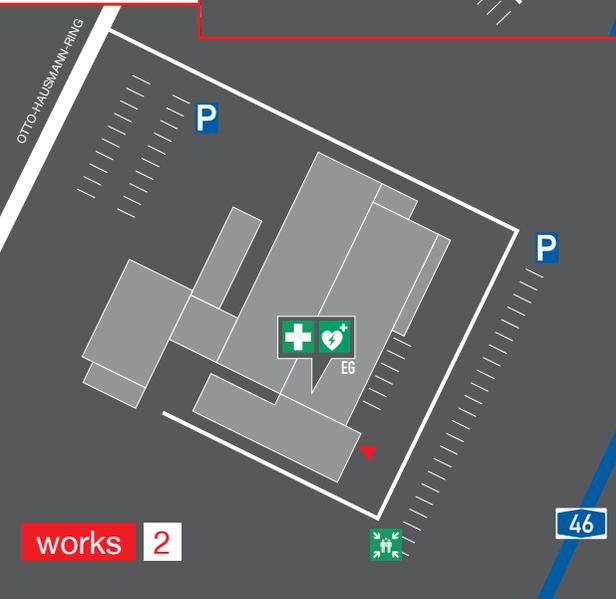

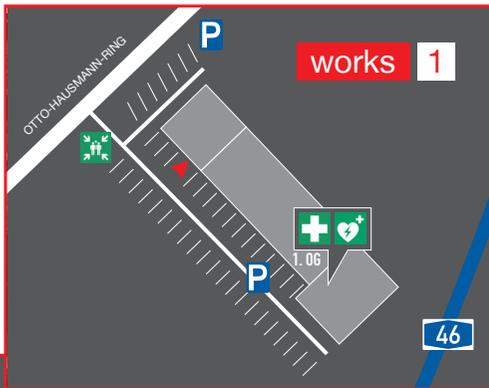

Information for Your Safety

KARL DEUTSCH

Welcome

to KARL DEUTSCH! We look forward to your visit. To ensure you feel comfortable and safe with us, we have prepared this guide. Especially during ongoing operations, it is important to always be attentive and proactive.

Behaviour on the works grounds and the works buildings

-  Always follow the instructions of your contact partner and never move around the works grounds on your own.
-  Please always stay on the designated walkways.
-  Please use your own foot protection or the foot protection provided in the entrance area of works 2.
-  Please use the hand protection provided.
-  Please use the eye protection provided.
-  Please use the hearing protection provided.
-  Please use the face shield provided.
-  The works grounds are under video surveillance.

The Road Traffic Regulation (StVO) apply throughout the entire works premises. Please drive at walking speed and park only in the designated spaces.

Please do not enter any restricted areas.

Touching and reaching into machines and equipment is only permitted with instruction and under supervision.

Eating and drinking is prohibited in all areas.

Please never use elevators in the event of a fire.

Image, video, and audio recordings are generally prohibited.

There may be a risk for people with pacemakers and metal implants.

Smoking and open flames are prohibited throughout the works premises.

Behaviour in an emergency

-  In the event of an accident involving hazardous substances, use the eye wash station or emergency shower immediately.
-  In case of danger, use the escape routes and emergency exits to reach the nearest assembly point.
-  In the event of sudden life-threatening cardiac arrhythmia or cardiac arrest, use the AED immediately.
-  Report an accident **112**
-  Report a fire **112**

Please always watch out for forklifts throughout the works premises.

Please always watch out for suspended loads.

Warning of areas with magnetic fields.

Warning of corrosive substances.

Warning of substances or mixtures with health hazards.

Warning of obstacles on the floor and slipping hazards.
